### **Overview**

- 1) The Context of NYC Child Welfare Services
- 2) Exploring Change: Why We Need Collaborative Quality Improvement
- 3) Installing Change: Designing Collaborative Quality Improvement
- 4) Initial Implementation: Where We Are Today

## The Context of Child Welfare Services in New York City

## **The Challenge**

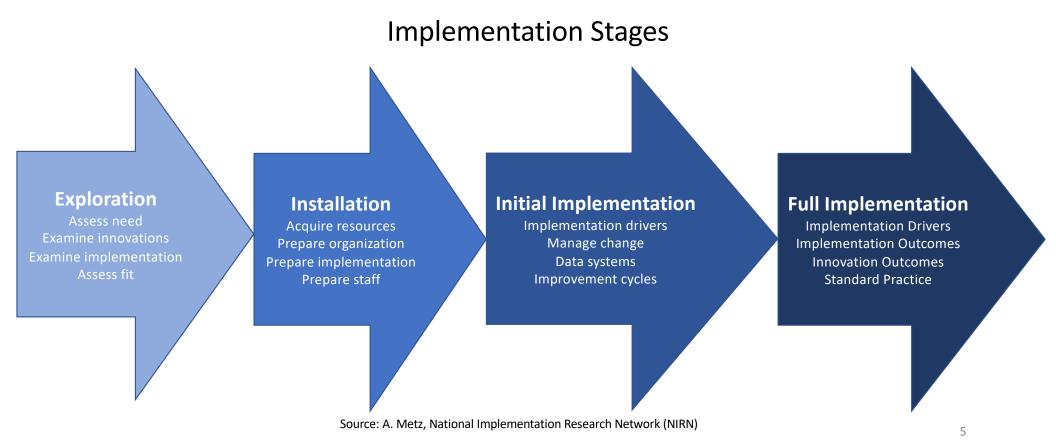

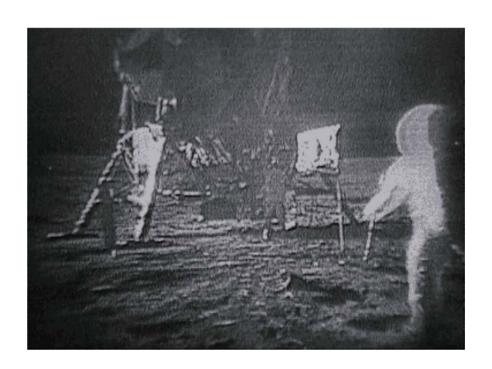

**Accountability** 

**Collaboration** 

## **Active Implementation Framework**

# **Exploring Change:**Why We Need Collaborative Quality Improvement

### **Vision for Collaborative Quality Improvement**

- 1) More Valid and Reliable Data Collection
- 2) Comprehensive Analysis of All Data
- 3) COLLABORATIVE Approach (ACS + Providers)

### **OUR SHARED GOAL:**

Improve services and outcomes for NYC children and families

### **Collaborative Quality Improvement Methodology**

#### **PROGRAM EVALUATION**

QUANTITATIVE process focusing on program outcome data

#### **ORGANIZATIONAL ASSESSMENT**

QUALITATIVE process focusing on organizational health and functionality

CoQI provides a comprehensive understanding of provider agency performance

## **CoQI Program Evaluation**

#### QUANTITATIVE Process Focused on Outcomes Data

### **FEATURES**

- 1. UNIFORM
- 2. STANDARDIZED
- 3. CLEAR
- 4. TRANSPARENT

#### **BENEFITS**

- APA evaluation cycle aligns with PAMs calendar and data collection across APA
- Same evaluation measures and reporting tools allow for aggregation and more accurate trends analysis
- Understandable protocols and easy-to-use tools minimize errors
- Builds trust and shared accountability; Advanced data sharing and joint problem-solving opportunities

## **CoQI Organizational Assessment**

QUALITATIVE Process Focused on: Organizational Health

### **FEATURES**

- 1. EVIDENCE-BASED
- 2. COMPREHENSIVE
- 3. CLEAR
- 4. STANDARDIZED
- 5. EXPEDITED

#### **BENEFITS**

- Based on best practice model
- More holistic, accurate view of provider functioning
- Understandable protocols and easy-to-use tools minimize errors
- Same evaluation measures and reporting tools allow for aggregation and more accurate trends analysis
- Quicker turn-around time yields more timely action and solutions

# **Installing Change: Designing Collaborative Quality Improvement**

## Marshmallow Challenge

### **Preparing for Change: Resources and Partners**

# Heather Henderson

### **Preparing for Change: Staff**

- Model built with and by staff
  - Collaboration amongst staff and leadership
  - Staff voice in every change and update to the model at initiation and beyond
- CoQI bootcamp sessions for staff on each phase of the model
- Protocols created with process steps and sample language for communication with providers
- Each evaluator was given one-on-one support from the CoQI consultant in each meeting they facilitated and each report written

### **Preparing for Change: Partners**

- Kick-off sessions with Providers
- Road show meetings with key leadership of the agencies and presentations during regularly scheduled meetings
- The creation of a provider advisory group which supported and helped with the creation of the phases of the model
- The creation of provider protocols with guidance on how to prep for meetings, awareness of expectations

\*\*\*All changes and updates made to the protocol are first introduced to providers. We maintain an open feedback loop.\*\*\*

## **Considering Your Local Context**

 How would you characterize your relationships with providers across the continuum of accountability and collaboration?

 Are there opportunities for increasing the level of collaboration and communication with these partners?

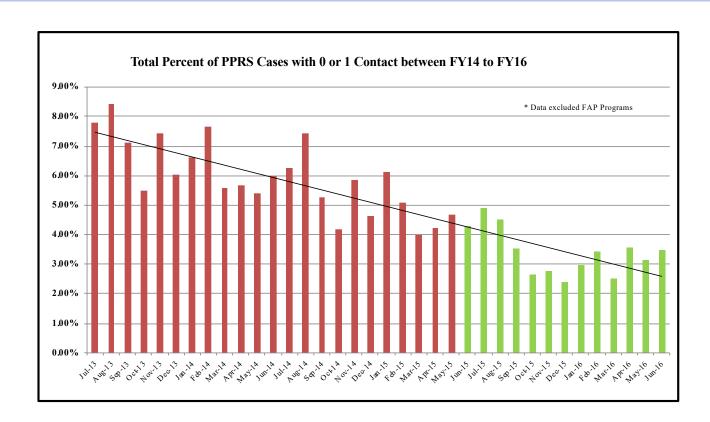

# Initial Implementation of CoQI: Where We Are Today

## **Early Results**

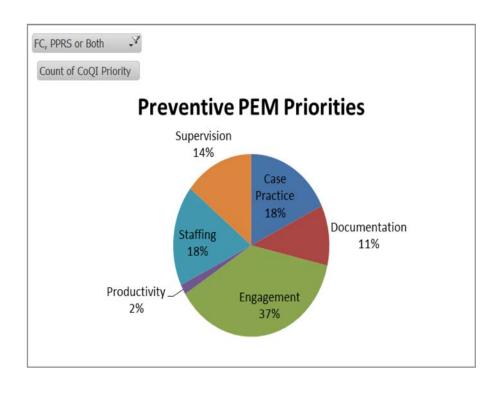

- 1) Developed comprehensive monitoring system that balances accountability and collaboration
- 2) Improved communication with providers
- 3) Comprehensive approach to discussing data internally with ACS leadership

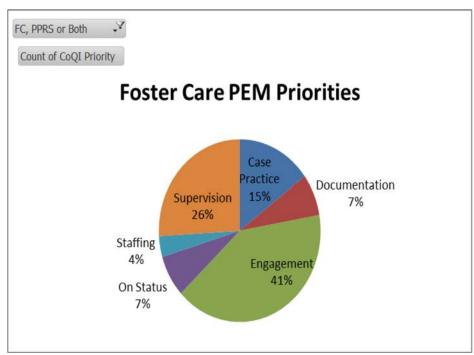

## **Safety Process Improvements**

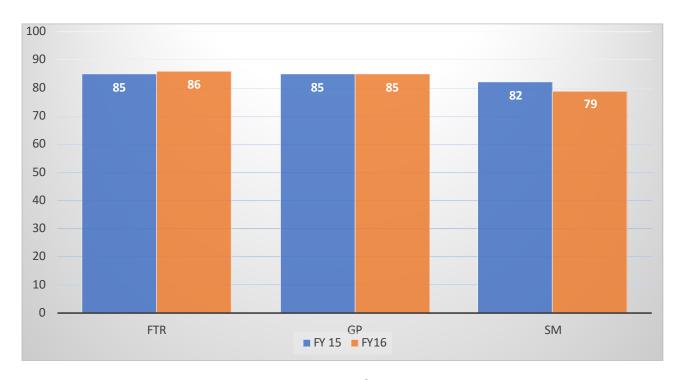

Sustained increase in the number of contacts made by our providers from FY15-FY16.

## **Cycle One Priorities**

## **No Immediate Change in Practice**

**Indicator: Strategies for Engagement** 

### **Changes for Cycle Two**

- Simplified CoQI Model
- Organizational selfassessment

## The NYC Provider Organizational Review

Informed by the Institutional and Organizational Assessment (IA) Model

Self- Assessment Tool & Process

Infused with
Continuous Quality
Improvement (CQI)
concepts

## Organizational Self-Assessment: Provider Impressions

- 1) Helped think more broadly and comprehensively about the performance, health of their agencies, and resources
- 2) Components and indicators reflect best practice and exceed ACS' current performance standards for contracted agencies
- 3) Provides a roadmap for building capacity and improving functioning across the organization, better preparing agencies for the next contracting cycle

## Organizational Self-Assessment: ACS Feedback

- Supported decision making and guidance to agencies with regards to the new allotted funds for preventive services expansion
- 2) Informed ACS' support to agencies as we strategize as a system to address the staffing gaps impacting program functioning
- 3) Assisted in narrowing the focus of support ACS will provide for the agencies as they build and strengthen their own CQI systems and internal QA/QI mechanisms

## **Reality Check**

How do your organizations handle the feedback loop of trying to assess whether an intervention has achieved its intended purpose?

What is the timeline for needing to see results?

How do you course-correct?

## **External Forces**

### **Cycle Three and Four Updates**

- 1) Extended timeline for Program Improvements
- 2) Introduction of target setting methodology
- 3) Streamlining of PEM Priority selection
- 4) Reduced number of meetings included in the cycle
- 5) Streamlining of summary documentation

## **CQI of Collaborative Quality Improvement**

4) Performance Check-In

(Call or Agency Visit)

√ Follow-Up

### **Collaborative Quality Improvement**

**Follow Up Discussion** 

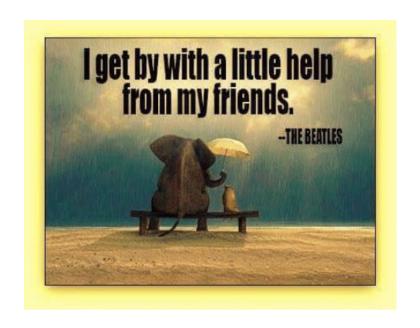

## **Mandated Safety Assessment**

The Mandated Safety Assessment is a step in the CoQI process that can be triggered at any point in the cycle in three ways:

- Safety practice concern
- Critical incident
- Overall low performance safety score This refers to overall low performance in
   a PAMS review, scorecard results,
   quarterly data issued.
