Min

Instructions: Play the Lemonade dollar-a-glass game and record your results. The price per cup may be a range for the day if you started at one price and changed it (Example: \$1-\$3). When finished playing the entire week, please calculate the total, average, max, and min for each category. Select your days of the week column and daily/profit loss column and create a line chart. Then answer the questions below.

Did you have a profit or loss for the week? How much?

How could you increase the profits of your lemonade stand?

What business decisions would you change if you did this again?
